Capacities of these various truck versions vary from 3,000 to 33,000 lbs. All trucks are designed in an ISO 9001 certified facility.

Doosan Infracore America is the fastest expanding lift truck business in the North American market, thanks to their consistency in retaining a high degree of consumer service excellence and optimum product functioning to all Doosan Infracore Forklift users. The U.S. lift Truck division stationed in Cleveland has a expert team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original domestic lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled forklifts as part of a national machinery expansion venture. Initial product sales of this industrialized equipment focused on large business groups, the armed forces and on state-run companies. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Daewoo began the first home-based lift truck business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a position of significant expansion of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling industry. This plan radically expanded Daewoo's lift truck sales. Construction was finished in 1984 to facilitate a contemporary plant which helped launch the company for the fabrication of high added-value products suitable for export. In 1993, the company had a global sales network and started exporting versions they had established through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into international markets.
